OCTYLPHENOL.....	A-8
BISPHENOL A.....	A-15

### Appendix B

### Appendix C

NONYLPHENOL .....	C-1
OCTYLPHENOL.....	C-10
BISPHENOL A.....	C-19

## 1. General

This PT was provided by AQS Baden-Württemberg in cooperation with IWW Water Center in Mülheim an der Ruhr and with the network “NORMAN” (Network of reference laboratories for monitoring of emerging environmental pollutants). In this round following parameters were to be determined:

notation long (notation short)	parameter or parameter group	CAS-number of the parameter or parameter group
Nonylphenol (NP)	4-Nonylphenol (branched) / isomeres mixture	84852-15-3
Octylphenol (OP)	4-(1,1',3,3'-tetramethylbutyl)-phenol	140-66-9
Bisphenol-A (BPA)	Bisphenol-A	80-05-7

The PT was executed and evaluated according to the requirements of DIN 38402-A45 and ISO/TS 20612.

## 2. PT design

Each participant received the following samples:

- 3 samples for the determination of Nonylphenol, Octylphenol and Bisphenol A in 1000-ml-ground bottles.

3 different concentration levels/batches were produced. All participants received the same samples.

## 3. Sample preparation

The samples for the determination of the alkylphenoles were based on a real ground water matrix from the northern part of the region Ruhr in North Rhine-Westphalia. The ground water was used without treatment for the sample preparation.

The ground water was spiked with stock solutions and the concentrations covered drinking and ground water relevant ranges.

## 4. Sample distribution

The samples were dispatched on 30 June 2020 by express service

## 5. Analytical methods

The participants were free to choose a suitable method, but following limits of quantification were required.

parameter	limit of quantification [ $\mu\text{g/l}$ ]
Nonylphenol	0,08
Octylphenol	0,02
Bisphenol A	0,02

The participants were informed that the samples had to be analysed in the own laboratory, with own personal and own equipment. Subcontracting of the analysis was not allowed.

The samples had to be analysed in duplicate over the complete method (sample preparation and measurement). The participants were asked to report the results as average values in  $\mu\text{g/l}$  with three significant digits.

## 6. Submission of the results

The deadline for the submission of results was on 24 July 2020.

## 7. Basic principle of evaluation and assessment

The basic principle of the evaluation and assessment of the PTs from AQS Baden-Württemberg are described in the document „Evaluation of the PTs and information for the report“, which can be downloaded from [www.aqsbw.de/pdf/ausw\\_berichte\\_v1\\_en.pdf](http://www.aqsbw.de/pdf/ausw_berichte_v1_en.pdf).

This PT was evaluated as follows:

<b>Assigned value <math>x_{pt}</math>:</b>	Reference value
<b>Standard deviation for proficiency assessment <math>\sigma_{pt}</math>:</b>	Q method Variance function
<b>Upper limit of <math>\sigma_{pt}</math>:</b>	25 %
<b>Lower limit of <math>\sigma_{pt}</math>:</b>	5 %
<b>Assessment:</b>	$z_u$ -Score
<b>Classification of the single results:</b>	$ z_u  \leq 2,0$ successful $2,0 <  z_u  < 3,0$ questionable $ z_u  \geq 3,0$ unsatisfactory
<b>Parameter assessment:</b>	A parameter was assessed as successful, if more than half of the values were correctly determined (2 out of 3 values are within the tolerance limits).

## 8. Evaluation

<b>Number of participants:</b>	34 1 laboratory did not report results												
<b>Number of reported values</b>	258												
<b>Number of accepted values:</b>	201 (77,9%)												
<b>Illustration of the successful and not successful laboratories for each parameter</b>													
<p>The chart displays the count of laboratories for each parameter, divided into successful (white) and not successful (black) categories. The y-axis represents the 'number of labs' from 0 to 35. The x-axis lists the parameters: Nonylphenol, Octylphenol, and Bisphenol-A.</p> <table border="1"> <thead> <tr> <th>Parameter</th> <th>Successful Labs</th> <th>Not Successful Labs</th> </tr> </thead> <tbody> <tr> <td>Nonylphenol</td> <td>21</td> <td>6</td> </tr> <tr> <td>Octylphenol</td> <td>23</td> <td>6</td> </tr> <tr> <td>Bisphenol-A</td> <td>23</td> <td>8</td> </tr> </tbody> </table>		Parameter	Successful Labs	Not Successful Labs	Nonylphenol	21	6	Octylphenol	23	6	Bisphenol-A	23	8
Parameter	Successful Labs	Not Successful Labs											
Nonylphenol	21	6											
Octylphenol	23	6											
Bisphenol-A	23	8											

## 9. Explanation for the appendices

The explanations for the appendices can be found in the document „Evaluation of the PTs and information for the report“, which can be downloaded from [www.aqsbw.de/pdf/ausw\\_berichte\\_v1\\_en.pdf](http://www.aqsbw.de/pdf/ausw_berichte_v1_en.pdf).

## 10. Measurement uncertainty

### General:

Number of labs with valid values	33
Number of labs with valid values and reported measurement uncertainties	20 (60,6%)
Number of valid values	258
Number of valid values with measurement uncertainties	157 (60,9%)

### Measurement uncertainties against the accreditation status

Accreditation status of the values	Number of values	Number of values with measurement uncertainty
accredited	117	84 (71,8%)
not accredited	73	33 (45,2%)
not specified	68	40 (58,8%)

### Interpretation of the reported measurement uncertainties:

If measurement uncertainties are underestimated values assessed as “satisfactory” in the PT ( $|z_u| \leq 2$ ), will have a large  $\zeta$ -score.  $|\zeta| > 2$  means that the “own” requirements (defined in terms of estimated uncertainty) are not fulfilled.

<b>Number of values with reported measurement uncertainty having a <math> z_u  \leq 2,0</math></b>	118
<b>Number of values with a magnitude of <math>\zeta</math>-scores <math>&gt; 2</math></b> The own requirements of the laboratory are not fulfilled and the estimation of the measurement uncertainty is too low	34 (28,8%)

## 11. Traceable reference values

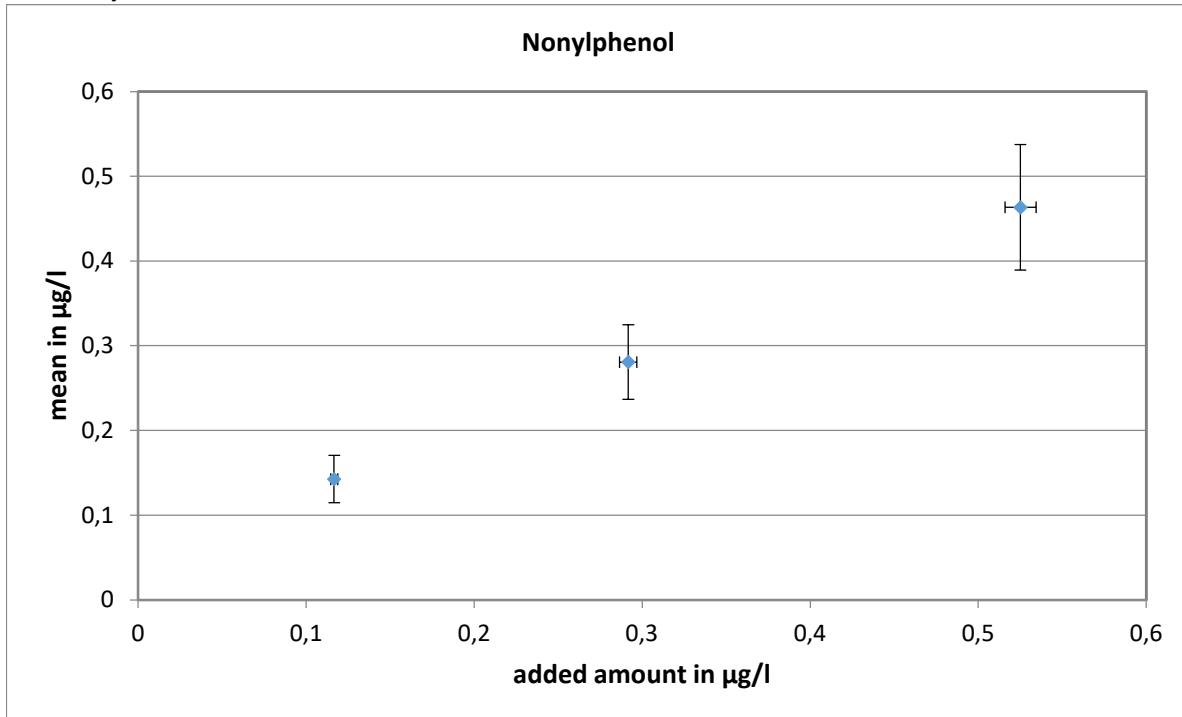

The explanations about traceable reference values can be found in the document „Evaluation of the PTs and information for the report“, which can be downloaded from [www.aqsbw.de/pdf/ausw\\_berichte\\_v1\\_en.pdf](http://www.aqsbw.de/pdf/ausw_berichte_v1_en.pdf)

## 12. Internet

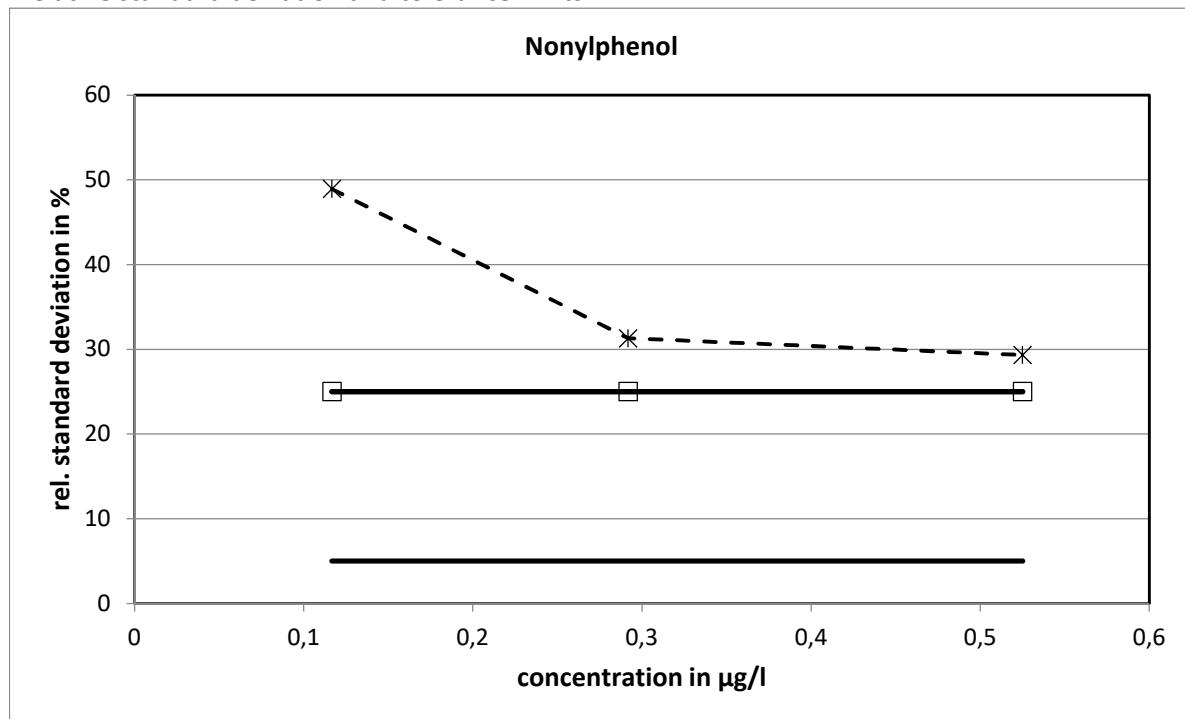

The report is available on the following webpage: [http://www.aqsbw.de/pdf/report\\_223.pdf](http://www.aqsbw.de/pdf/report_223.pdf)

# Nonylphenol

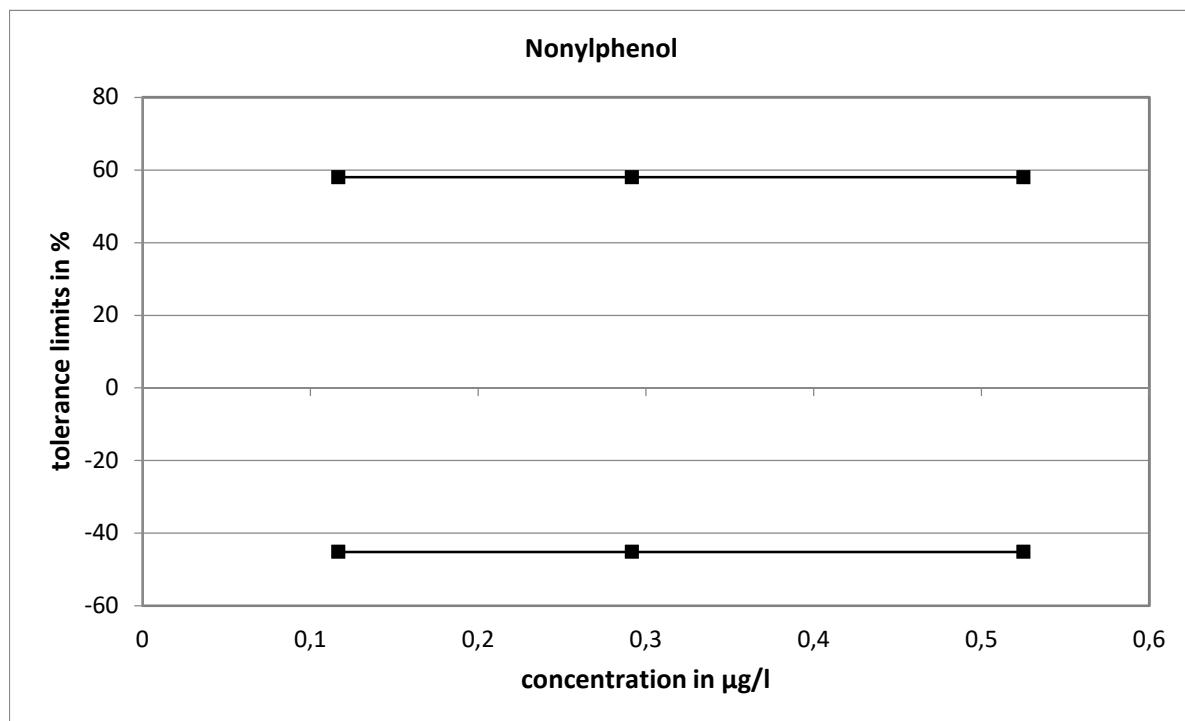

level	assigned value [ $\mu\text{g/l}$ ]	expanded uncertainty of the assigned value [%]	standard deviation, calculated using robust statistics [ $\mu\text{g/l}$ ]	standard deviation for proficiency assessment [ $\mu\text{g/l}$ ]	standard deviation for proficiency assessment [%]	upper tolerance limit [ $\mu\text{g/l}$ ]	lower tolerance limit [ $\mu\text{g/l}$ ]	upper tolerance limit [%]	lower tolerance limit [%]	number of results	out below	out above	out [%]

								sum	80	5	11	20,0	

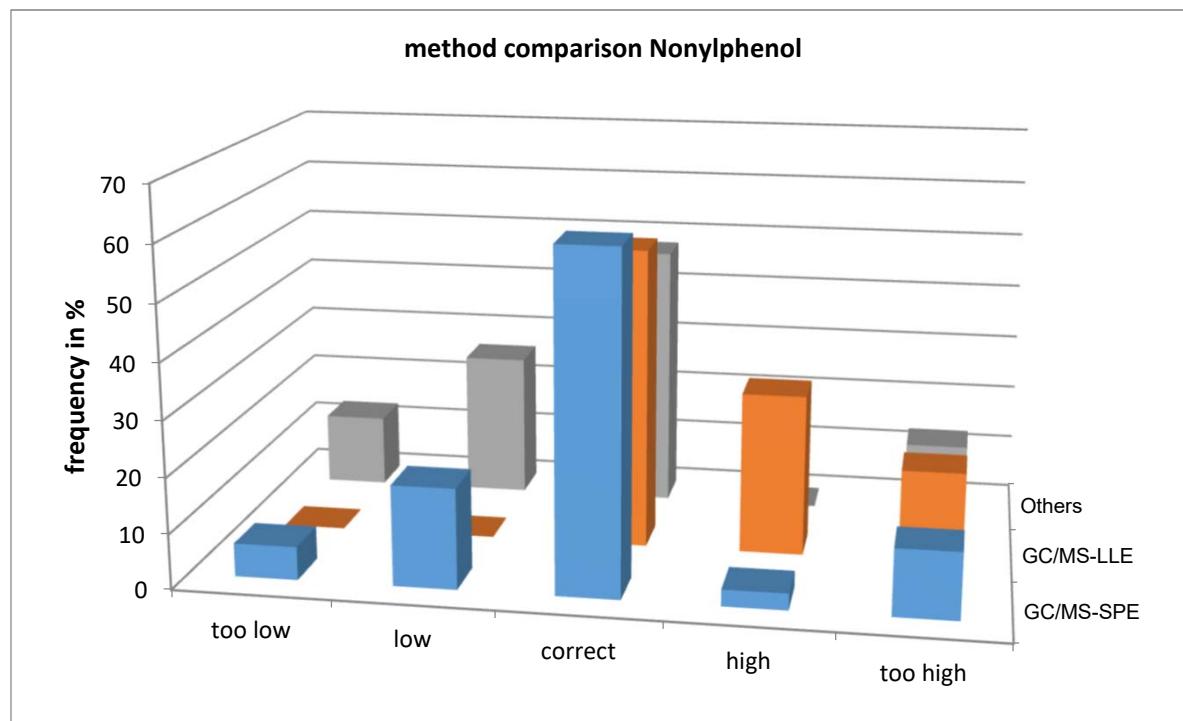

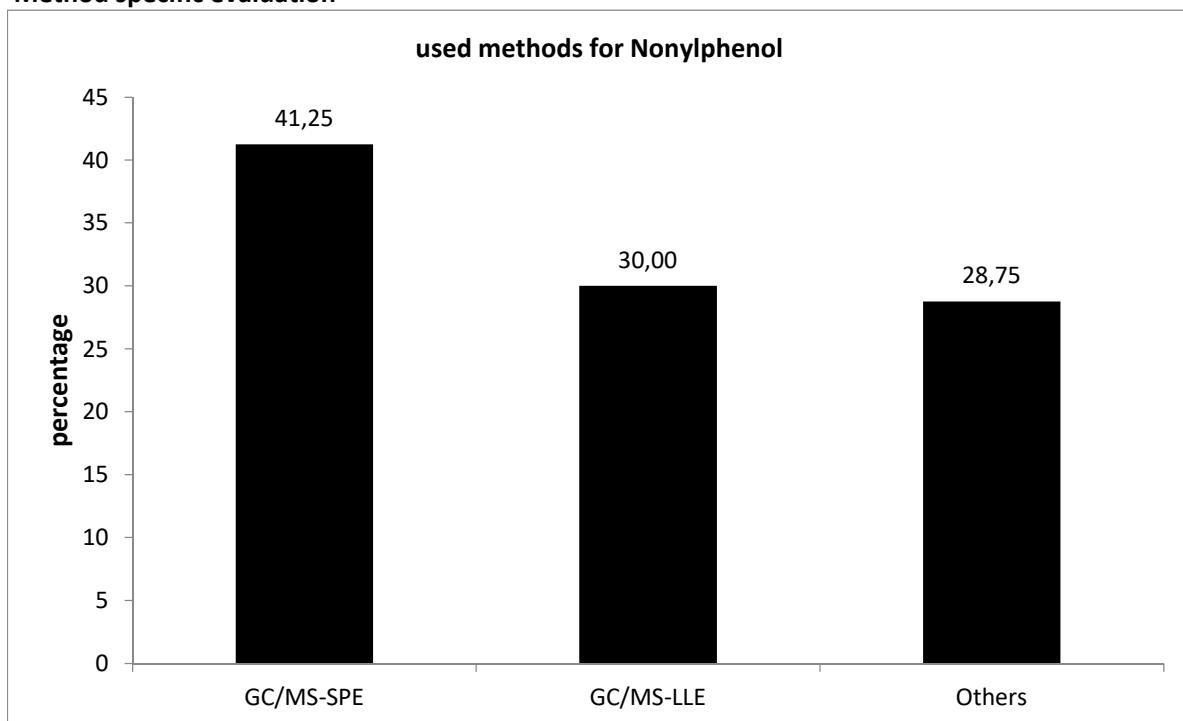

**Recovery**

There is no calculation of the recovery rate.

**Relative standard deviation and tolerance limits**

The relative standard deviations calculated with the Q-method reached the upper limit with all concentration levels.

**Method specific evaluation**

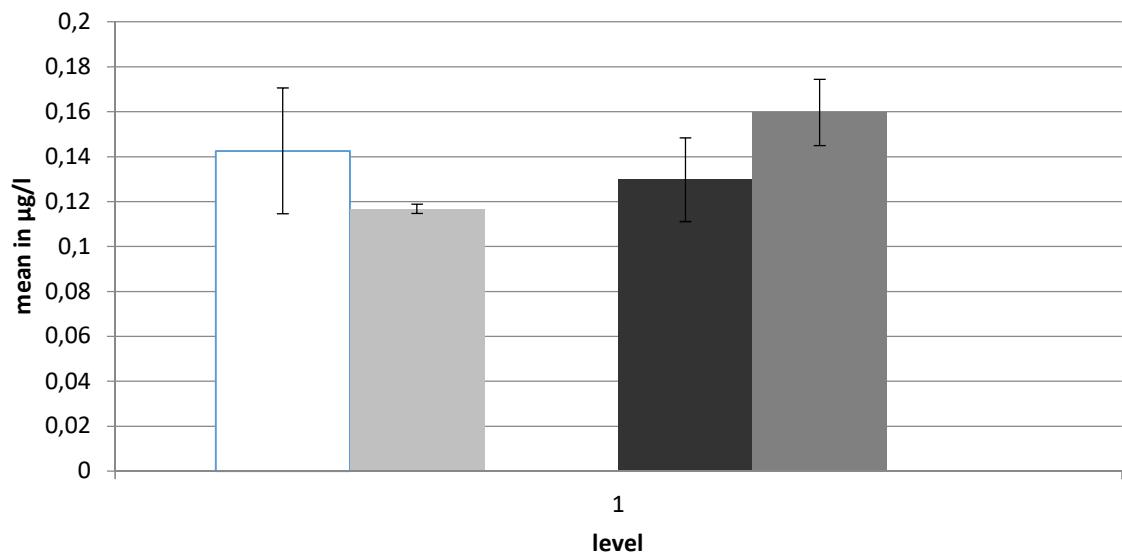

The GC/MS method with liquid extraction lead to rather higher values, whereas the application of the solid phase extraction lead to rather lower values.

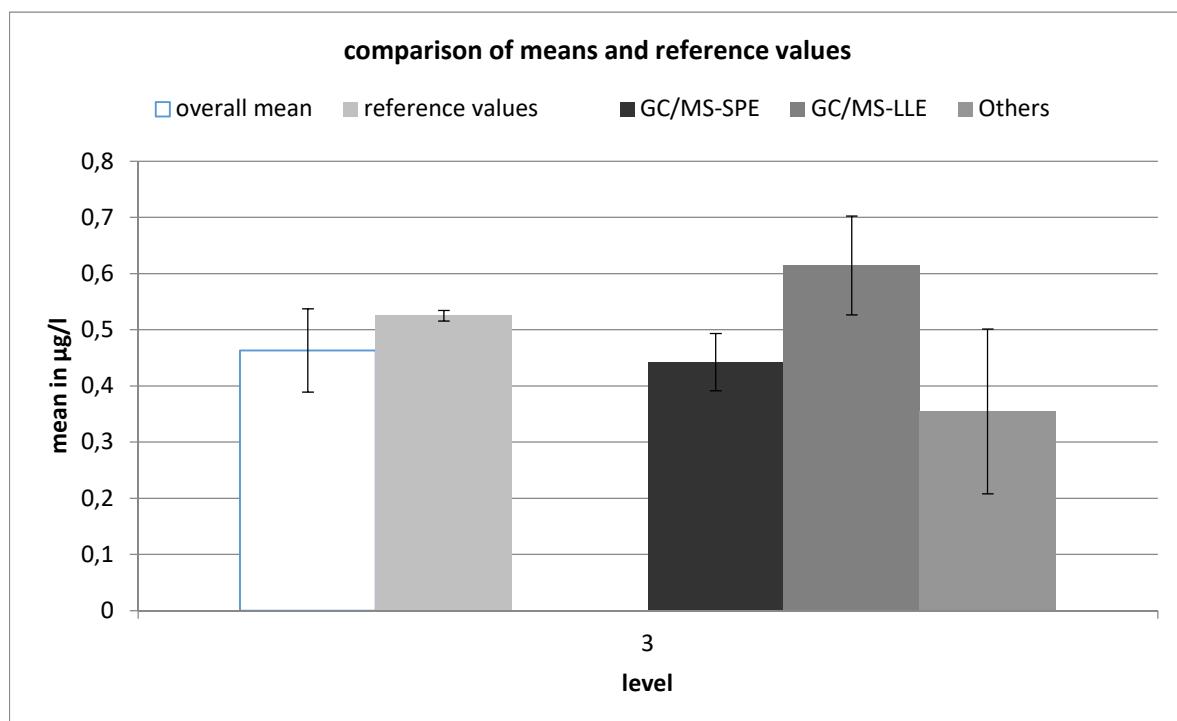

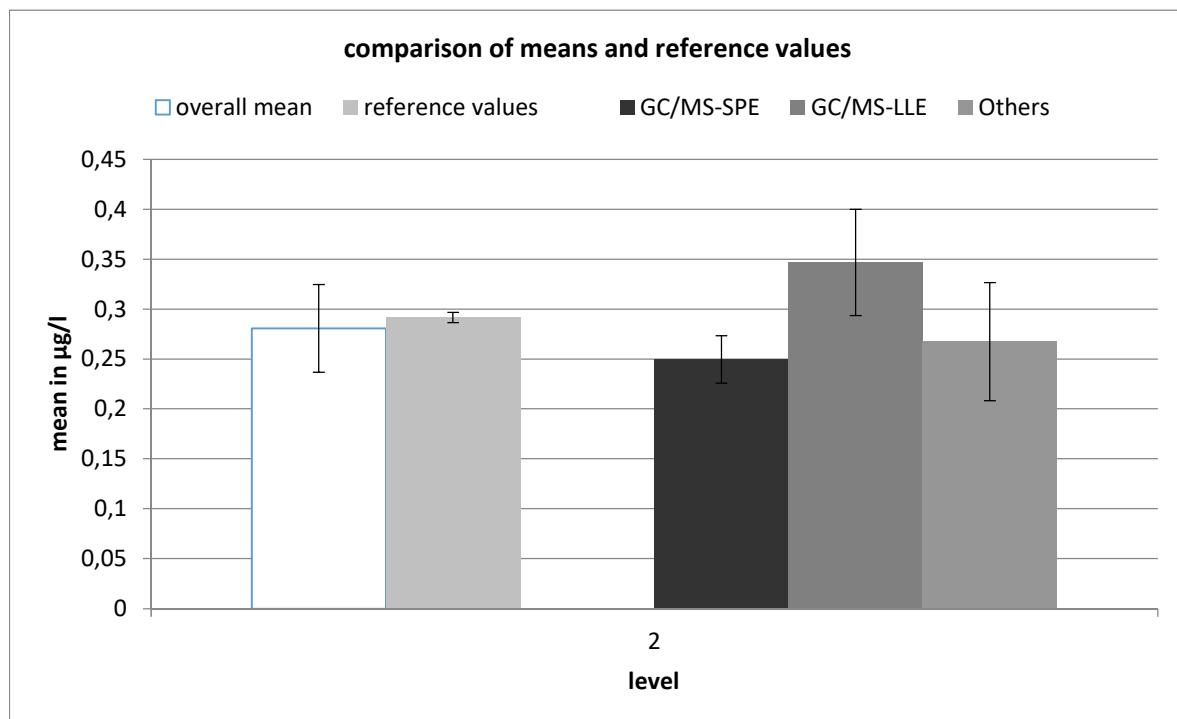

**Comparison of means and reference values**
